Mark Lundgren is posting on Facebook that this area will just be milled and paved. Is that true? Or are there plans to re-engineer that road area?

The road is being repaired based on the engineering recommendations from DEEP, town and association engineering so why would the road be re-engineered again at the cost to the taxpayers? However there is more needed besides milling and paving. I am not sure where he would be getting his information from because he has never been involved in the process. I am including public work on this email so they are in the loop of questions from residents.
